HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Corrigendum to

“Extreme value modelling of storm damage in Swedish forests” published in Nat. Hazards Earth Syst. Sci., 7, 515–521, 2007

A. Bengtsson¹ and C. Nilsson²

¹Mathematical Statistics, Centre for Mathematical Sciences, Lund University, P.O. Box 118, 22100 Lund, Sweden

²Department of Physical Geography and Ecosystems Analysis, Geobiosphere Science Centre, Lund University, Sölvegatan 12, 22362 Lund, Sweden

Figures 2, 3 and 4 should be replaced by the following:

Fig. 2. Estimated shape parameter, ξ , (top) and scale parameter, σ , (bottom) together with corresponding 90% confidence intervals for thresholds $u=[0.05, 1.8] \text{ Mm}^3$.

Fig. 3. Median-unbiased quantile (top) and probability (bottom) plots for a generalised Pareto distribution with estimated parameters $\hat{\xi}=1.00$ and $\hat{\sigma}=1.04 \text{ Mm}^3$.

Fig. 4. The theoretical hundred year storm damage defined as the quantile $x_{1,1/100}$, plotted as a function of chosen threshold.
